Niagara 4.8 Release Notes

Information

Description

Issues fixed in Niagara 4.8 Release

Release Notes not assigned to a module

HAREMB- 1036	Edge10 - Unexpected Bridge Priority values for RSTP configuration			
Prior to Niagara 4.8, the TCP/IP Host Editor and JACE System Shell Menu presented the incorrect display value for BridgePriority STP values "28762" and "61140". This is a display only issue and even if these (non-default) values were used, the correct value "28672" and "61440" would be used by the STP configuration. This has been corrected.				
HAREMB- 1107	IACE-8000 "System clock modified" does back then later comes torward			
	S time on the JACE-8000 would sometimes keep drifting far apart. Time synchronization C and OS has been reworked to prevent this from happening.			
HAREMB- 1162	USB bus re-enumerates under heavy communications load			
buffer sizes token to be	sb message buffer sizes on usb rs485 and rs232 modules. Increased usb tx message for usb serial driver. Fixed mstp state machine condition that could sometimes cause incorrectly retransmitted or dropped. Improved reliability of MSTP over JACE-8000 usb- stem has been improved			
HAREMB- 507	JACE-8000 defaults to factory recovery even if USB backup is present			
panel USB I connection recovery pro	ds the backup/restore button during boot, and has a USB device mounted into the front backup/restore port, and the user does not register a keystoke via the serial terminal to indicate a restore is desired, previously the unit would have automatically entered the bcess. With this release, the recovery/restore process will be aborted and the unit will h normal boot. If recovery is desired, no USB device can be mounted into the ore port.			
NCCB- 19235	After selecting Make Trend as "False" in the runtime block, it renders data in the trend request.			
Runtime block is a special block, where the TrendData and ValueData both are valid. 'makeTrend' property is now removed as it is not being used.				
NCCB- 33083	Multurend ()rd scheme throws excention when used as multuard scheme			
MultiTrend (Ord Scheme will not throw an error/exception when used as multi ord scheme			
NCCB- 33290	Read Rande Reducet to a non-array object with an array index			
	nt_List property of Notification Class Object, Device_Address_Binding, /_Subscriptions properties of Device Object, List_Of_Object_Property_References			

Knowledge Article					
property of Schedule Object, Log_Buffer property of Trend Log Object, Alarm_Values, Fault_Values properties of Multi-state Input and Multi-state Output Objects and Date_List property of Calendar Object, Time_Synchronization_Recipients, UTC_Time_Synchronization_Recipients and Restart_Notification_Recipients properties of Device Object should return property is not an array with read range with array index valid value					
NCCB- 34322	I-Am broadcast optimization for BBMU				
	fix, I-AM response to WHO-IS request was a GLOBAL_BROADCAST. Now I-AM a unicast to the source of the WHO-IS request.				
NCCB- 34384	Area Information is displayed after disabling the Area Normalization and updating the report				
From first re	fresh, the floor area value correctly appears in the NodeEditor.				
NCCB- 34812	Session timeout: Continue option does not work when Station tab is not focused				
timeout if a selecting co introduced a	e option in the session timeout warning dialog would not properly reset the session tab for the station was not in focus, causing the session to time out shortly after ntinue. This has been corrected and the session timeout is properly reset. This a breaking change documented at https://www.niagara- com/articles/Developer_Document/Breaking-Change-Session-Timeout-API.				
NCCB- 35801	If data is missing in the Average Profile Chart, the x axis values are displayed with uneven intervals.				
Fixed to sho	w equal intervals of time stamp in x axis				
NCCB- 35901	Bulk Deploy does not recognize Excel (.xlsx) workbooks				
Bulk deploy	operations can now use the .xlsx file format.				
NCCB- 36092	On deleting a point, baseline editor still shows the old point's name				
On deleting	a point, baseline editor now removes the point name when the node is deleted.				
NOCE					
NCCB- 36364	Analytics performance issues with UX Controls in PX views				
Fixed Analytics Performance issues with UX Controls in PX views					
NACE					
NCCB- 36484	Missing Data Strategy Editor does not restrict the K Value limit to 30				
	eighbor algorithm, in the Missing Data Strategy editor, now allows K values between 1 Higher K values affect system performance.				
NCCB- 36809	The Daylight Saving Time shift from EDT to EST is shown horizontally in web table Binding				
The Dayligh Binding.	t Saving Time shift from EDT to EST is now fixed to show correctly in web table				

NCCB- 37010	Charts show the word "value" on the Y axis which should show units			
"value" text on the y-axis is now removed.				
NCCB- 37021	AnalyticsWebChart should default to "Line" instead of "Bar".			
Fixed to set	the default chart type to line chart			
NCCB- 37335	Niagara Daemon Servlets that extend DaemonServlet do not have thread safe XML response			
requesting t	ns of the Niagara Daemon could fail to respond with valid XML if multiple clients were he same servlet information at once. This could manifest as an error dialog appearing multiple Platform Administration Views connected to the same platform. This has been			
NCCB- 37649	Workbench TCP/IP Host Editor creates malformed STP link.cfg file			
	Host Editor created a malformed link.cfg configuration file when using non-default STP an Edge10 device. This has been corrected. Use the Serial Shell to configure the STP quired.			
NCCB- 37883	Time Range FROM Today - x Days to +1 Days does not display Day x			
	o incorrect conversion of days to weeks when the user selects "From" option in the e' drop down.			
NCCB- 38287	In Time Range Offset block, when selecting "End" as Time Range Part, the time stamps are not offsetting towards the end			
	ge Offset block, when "End" is selected as Time Range, and an offset is given, the are now offsetting correctly.			
NCCB- 38966	The units for Area Normalization are not displayed correctly			
The units for Area Normalization are now displayed correctly				
NCCB- 38980	Changing the time range in the binding and selecting "Use Request Time Range" in the Algorithm rollup block does not work.			
Changing the time range in the binding and selecting "Use Request Time Range" in the Algorithm rollup block will work as expected				
NCCB- 39046	If configuration for a chart is changed in the browser, the settings and data are not updated in PDF Export			
If you want to export the chart and retain all of the changes that you have made, you need to do the following: 1. Export the modified chart to a Station File (see "Exporting a chart (Workbench or browser)" in Niagara Web Charts Guide. 2. Create a Px view for this chart and load the exported Station File to this Px view. The chart will display with the modifications included. More information can be obtained from Niagara Analytics documentation pdfs.				

NCCB- 39987	Charts exported from analytics in csv format return an empty text file in workbench				
Charts exported from analytics in CSV format now displays the file correctly					
NCCB- 40332 Status filter FE is not editable when added through Analytics Data Manager					
Status filter	FE is now editable when added through 'new' button on the Analytics Data Manager				
NCCB- 40578	No Data is displayed when all the filters are selected form the Status Filter				
When all the	e status filters are selected, data with 'ok' status is returned				
NCCB- 40579	In Web table if data is in fault condition the status is shown as -				
Statuses on	the web Table now display all statuses correctly.				
NCCB- 40609	If Time Range is set in the time range selector and then changed to "Today", a message is displayed indicating it cannot save.				
Time range	change is able to save the setting with Today selected				
NCCB- 40623	Add URL whitelist for WebStart/WebLauncher				
By default, WebStart and WebLauncher can no longer be used to navigate to arbritrary Web addresses directly. The only way to directly load external URLs in WebStart is by entering a whitelist in the station's system property for niagara.webbrowser.urlWhitelist system property. See NCCB-42011 for details for syntax. If there are hyperlinks between stations and they are in each other's whitelists, then consider that you may still want to open a different WebLauncher or Webstart instance when you get to their login pages, as this ensures the modules that are loaded are specific to the station you are viewing.					
NCCB- 40625	Bajaux BacnetDate field editor does not display localized day of week				
In previous versions of Bacnet, the BacnetDate bajaux editor did not support localization. This is fixed now and users can select or edit BacnetDate in their local language.					
NCCB- 40677The Rollup block, when used in algorithms, is not returning data as per the Request Rollup and Request Time Range					
The Rollup Time Range	block, when used in algorithms, returns data as per the Request Rollup and Request				
NCCB- 40909	Data is not rendering correctly from algorithm with Sliding Window and COV History Extension				
EnumSchedule output is handled as part of this defect and appropriate Enum value can be used for the Algorithm Blocks (Sliding Window and other Functional Blocks).					
NCCB- 41284	Day Time Range includes 12:00 AM from next day which adds an extra record to the result				

Charts and tables will not include today's data if we select yesterday as time range.

Description (cont.)

Release Notes assigned to one or more modules

NCCB- 19952	Linux Installer, nre	Workbench/station fail to start if niagara_home path contains spaces		
In previous versions of Niagara, spaces in the installation path would cause Station and Workbench to fail to start. This has been resolved.				
NCCB- 35108	Linux Installer	Branded Linux Niagara install fails to validate brand, does not create directories		
		installer could incorrectly reject customized brand identifiers, nvalid characters. This has been corrected.		
NCCB- 37915	Linux Installer	Linux uninstaller version injection regression		
odd disp been fixe	lay issues in and could result in	erenced the version of Niagara to uninstall. This resulted in a some items not being removed during uninstall. This has nstaller may not correctly remove Desktop and Menu removed.		
NCCB- 27471	alarm, backup, baja, email, hx, kitPx, queryTable, schedule, smartTableHx	BHxDynamicTimeRangeFE and other Hx Views do not use the user language when its different from the platform language		
In Niagara 4.8 there is now a new public api called LexiconModule. Its similar to Lexicon and LexiconText and its used to help ensure that you are using the User's locale in any Lexicon translation. The constructor to LexiconModule takes just a ModuleName and all the translation calls like "get", "getText" and "getHtmlSafe" take Contexts and keys so you can ensure that the User's locale is used and not the platform locale. Many HxViews like HxDynamicTimeRangeFE have been changed to use that new api and ensure the User's locale is used whenever relevant.				
NCCB- 30294	alarm	Alarm Database UX views have non-localized text		
All text in the bajux Alarm Database Views is now localizable. The following keys were added to the alarm lexicon: * alarm.alarm=Alarm * alarm.db.perPage=\{0} per page * alarm.db.isEmpty=Alarm database is empty * alarm.dialog.close=Close * alarm.db.clearBeforeTimestamp=This operation will CLEAR alarm records before \{0} from the database. * alarm.db.clearOlderAlarms=This operation will CLEAR all alarms older than the selected alarm from the database. * alarm.db.clearSelectedAlarms=This operation will CLEAR ALL alarms from the database. * alarm.db.clearAllAlarms=This operation will CLEAR ALL alarms from the database. * alarm.db.clearAllAlarms=This operation will CLEAR ALL alarms from the database. * cannotBeUndone=The operation CANNOT be undone. * continue=Do you wish to continue? * alarm.table.page.noResults=No results * alarm.table.page.pageOf=Page \{0} of \{1} Additionally, the keys from alarmData columns were changes from alarm.console.columns.* to alarmData.* to allow reuse of lexicon values used in the bajaui Alarm Console.				
NCCB- 32994	alarm	% symbol in point facets causes errors for sms and email alarm recipients		
BFormat fields are now handled properly in the alarm recipient message body, which allows '%' symbols to be used in values that are sent to an alarm such as when the units of a numeric value are percent.				
NCCB-	alarm	Alarm Database Time does not match Alarm Db View time		

		Knowledge Article		
33627		due to TimeZone differences		
the web though the Alarm Da alarmDa	In earlier versions of Niagara, the Alarm Database View displayed timestamps in the timezone of the web browser (without noting which timezone was being used). This would make it appear as though the alarms had different times than those in the bajaui based versions of those views. The Alarm Database views now display timestamps in the TimeZone of the Alarm (based on the alarmData.TimeZone facet). Additionally, these views now also use the display name for Alarm Classes.			
NCCB- 38896	alarm	AlarmSourceExt AckedTransitions ToNormal bit not set when an alarm is active		
		to a Normal state is acknowledged, the AckedTransitions even if the point is currently in an alarm state.		
NCCB- 37618	alarmOrion, orion, rdbMySQL	Secure connections in MySql 5.1.42/8.0 do not work with AlarmOrion and Entsec because SSL certificate is not available at BOrionService.started		
	ing MySQL secure connection on when starting. This has bee	s with Orion services, Orion would fail to obtain a secure n resolved.		
NCCB- 39264	backup	Station based backup restore log emulation contains improper print lines		
Director based re	Previous versions of Niagara would improperly print the new line character to the Application Director output when restoring a Backup distribution file using the Niagara Station Backup Service based restore method. Distribution File based installations were unaffected. This behavior has been corrected.			
NCCB- 39509	backup, niagarad	BStationSurrogate restartStationAsync function does not respect restart override settings, prevents station restart in Backup Service unless auto restart		
Previous versions of the Niagara Station Backup Service could fail to restart a Niagara Station when instructed if the Niagara Station did not exit cleanly as part of the Backup restore. This known usage of this type of restore functionality was present in the Enterprise Security product. To workaround this behavior, ensure that the "Auto Restart" option is selected in the Application Director. This has been corrected.				
NCCB- 10527	bacnet	localDevice activeCovSubscriptions list not always cleaned up		
From build AX 3.8.501, Niagara 4.4.94.16, Niagara 4.6.96.30, Niagara 4.7.110.34 and Niagara 4.8.0.76 build, any COV subscription is canceled or expired on a bacnet object, removes corresponding COV subscription component from proxy point and COV subscription component ord from the active COV subscription list. And does stops other COV subscriptions to the same point from getting COV notification.				
NCCB- 24820	bacnet	BACnet normal(noAckRequired) alarms cause unacked offNormal(ackRequired) alarms to disappear		
	quired for toNormal state is uno on't disappear from console.	checked and alarm goes from offNormal to normal then		
NCCB- 32810	bacnet	Multistate Value object in fault state allows to write 0 to present value		
	defect resolution Multistate Va value property from a client us	lue Objects should not allow a "0" to be written to its		
		<u> </u>		

NCCB-		
34739	bacnet, webEditors	BACnet UX point manager does not handle duplicate names
would th		vs where duplicate discovered points added to the database table e now handled in the same way as workbench views by
NCCB- 34819	bacnet	Bacnet covSubscription exists even after subscription has expired
subscrip		d/expired on a bacnet object, it will remove corresponding COV / point and COV subscription component ord from the active
NCCB- 37344	bacnet	Bacnet Network does not initialize properly when installed via Application Template
	on template installation, re	d other types of references were non-functional after an quiring a station restart to reset the references. This has been
NCCB- 38226	bacnet	BACnet Confirmed Request max-APDU-length-accepted bit flags off-by-one
Fixed the	e corner cases where we w	vere out of bacnet spec section 20.1.2.5
NCCB- 38557	bacnet	Bacnet driver lockup on NPSDK platform

BACnet MOU-B: Doesn't receive any packets/logs while deleting any object using 'delete' button from keyboard now the Delete key action works to delete only a local object request. Users must use the Delete button in the AWS note Delete Object request.

NCCB- 35852	bajaScript	baja.Format JSDoc is incomplete	
Minor im	provements to baja.Format JSI	Doc	
NCCB- 36146	bajaScript	baja.AbsTime#toString shows seconds and millis by default	
Previously the default behavior of AbsTime.js did not match that of AbsTime.java and so bajaux and bajaui views were by default inconsistent. Now the bajaux view has been changed to match the bajaui version, and both by default do not display seconds or milliseconds, only date and time. Third party developers who intend to display seconds and/or milliseconds can now achieve this by editing their facets and setting showSeconds=true and showMilliseconds=true.			
NCCB- 36860	bajaScript	AbsTime#toString() with showSeconds: true now defaults to showDate: false	
version c		owDate and showTime facets to false, whereas the Java been fixed so the toString behavior should be identical in	
NCCB- 38165	bajaScript	BajaScript can fail to start in IE on an intranet site	
When WebSockets were enabled, BajaScript would sometimes fail to start in Internet Explorer when loaded from an intranet site due to Internet Explorer switching to Compatibility Mode, where WebSockets are not supported. This has been resolved so that it will fall back to HTTP polling when in Compatibility Mode. Note that this will adversely impact performance, so it is advised to configure Internet Options to disable Compatibility Mode for BajaScript sites.			
NCCB- 38378	bajaScript	BajaScript simples should return primitive values from valueOf()	
baja.Simple#valueOf would sometimes return the Simple instance itself instead of a primitive value as expected. Now, all Simples will return the string encoding from valueOf(), except those specifically overridden to behave differently.			
NCCB- 38441	bajaScript	baja.Format does not support conditional format syntax, time(), or user()	
BajaScript BFormat now supports conditional format syntax as well as user() and time() scripts.			
NCCB- 38978	bajaScript	baja.Facets will not correctly encode ORDs	
BajaScript Facets instances that included ORDs would not be correctly encoded to string. This prevented them being programmatically saved to the station or sent to RPCs. Facets that contain ORDs will now be correctly encoded. In addition, DynamicEnum, Marker, Ord, and TimeZone are now available in the HTML5 Facets editor.			
NCCB-	bajaScript	HTML5 graphics not showing up in cross-site frame

Previously, it was possible for client passwords to become corrupt when using Station Copier to transfer a station from a remote platform to workbench, and cause Station Copier to fail when attempting to transfer the station back to a remote platform. This has been corrected and passwords will be properly transferred. For affected versions, a workaround for this problem is to either reboot the remote platform prior to copying the station, or, for stations that have already been copied with corrupt passwords, use the Workbench "Bog File Protection" tool to "Force any password values that depend on the current file protection to be cleared." and re-enter any client passwords in the bog.
